*FYI (if you did not have the info already): Alteo will be available in tint sample from Zevenaar. And perhaps some urgent jobs as well if necessary.*

*Hello,*

*Like you know, De Ceunynck has already launched Alteo, Holland Optical will launch this product in december.*

*We've checked the feasibility and requirements of the market. There is a need to offer high service at this product. Therefore we have decided to offer this product with additional services.*

*We will source this product from near- and offshore labs, but we will prepare ALTEO for Rx production at Zevenaar lab.*

*Volumes which we will produce in Zevenaar are only lenses with tint according sample. Volume will be low. Semi-fenis are already known at Zevenaar.*

*Treatments which are feasible in Zevenaar are Neva Max UV and Neva Max Solaire UV.*

*Kind regards,*

*Arjen Hoogeveen*
